

The social engineer tool

THE Phisher

The phisher is a social-engineering tool which is used to find the username and password of a special domain like google, Instagram, Facebook, amazon, flip kart, WhatsApp, telegram, Zomato, P.u.b.g , free fire, etc. it is an easy tool to use in our general life.

The downloading & run step are: -

Step 1: - open your terminal in kali-Linux.

Step 2: - paste this link "git clone <https://github.com/KasRoudra/PyPhisher>".

step 3: - cd PyPhisher .

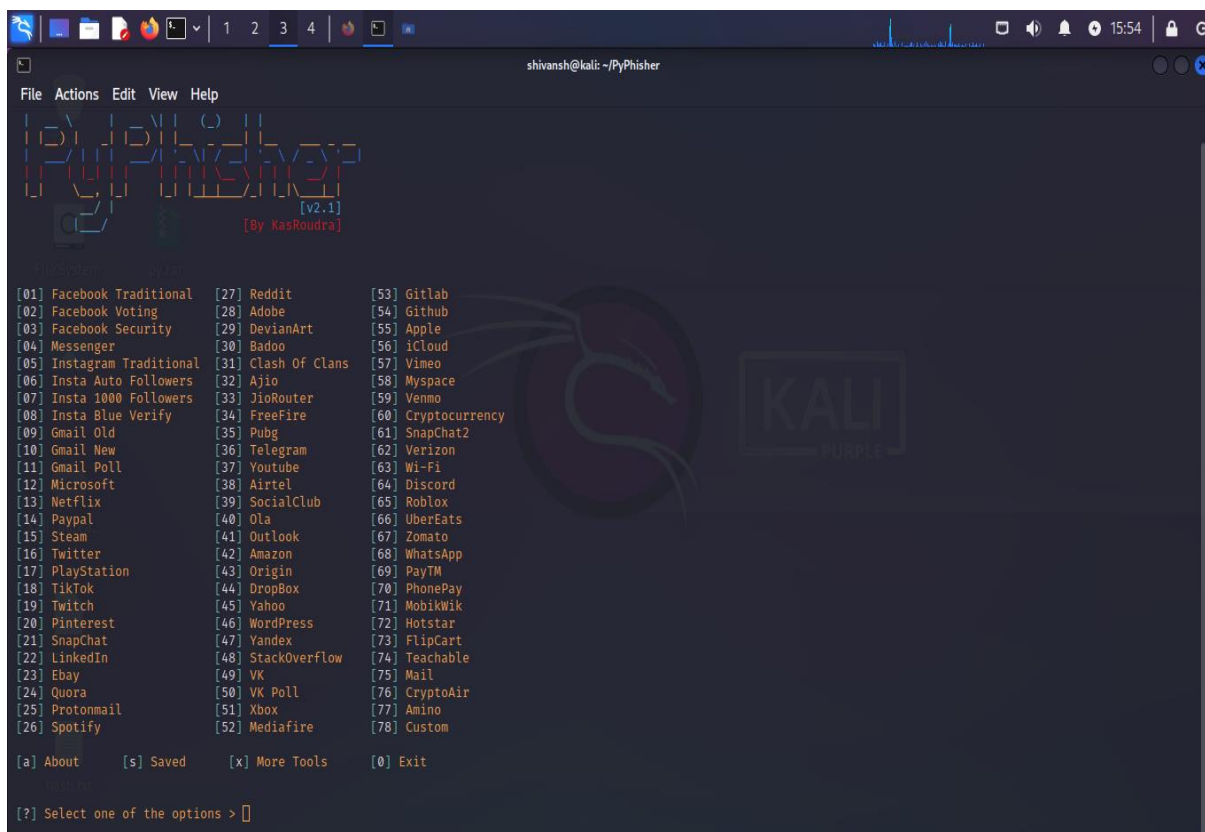

step 4: - paste this in your terminal "pip3 install -r files/requirements.txt --break-system-packages".

step 5: - to run the tool type this "python3 pyphisher.py".

If do you have loclx Auth token/account? [y/N/help]: then press y/n. In this case I have no account/Auth token on loclx . so, I press 'n' then enter.

IN this page you have too many options on this page / on terminal select one of the options and press enter.

("In this case I press 1 that is Facebook traditional ")

[?] Select one of the options >
```

Here is an option come 'Do you want OTP Page? [y/n] > 'press n then enters.

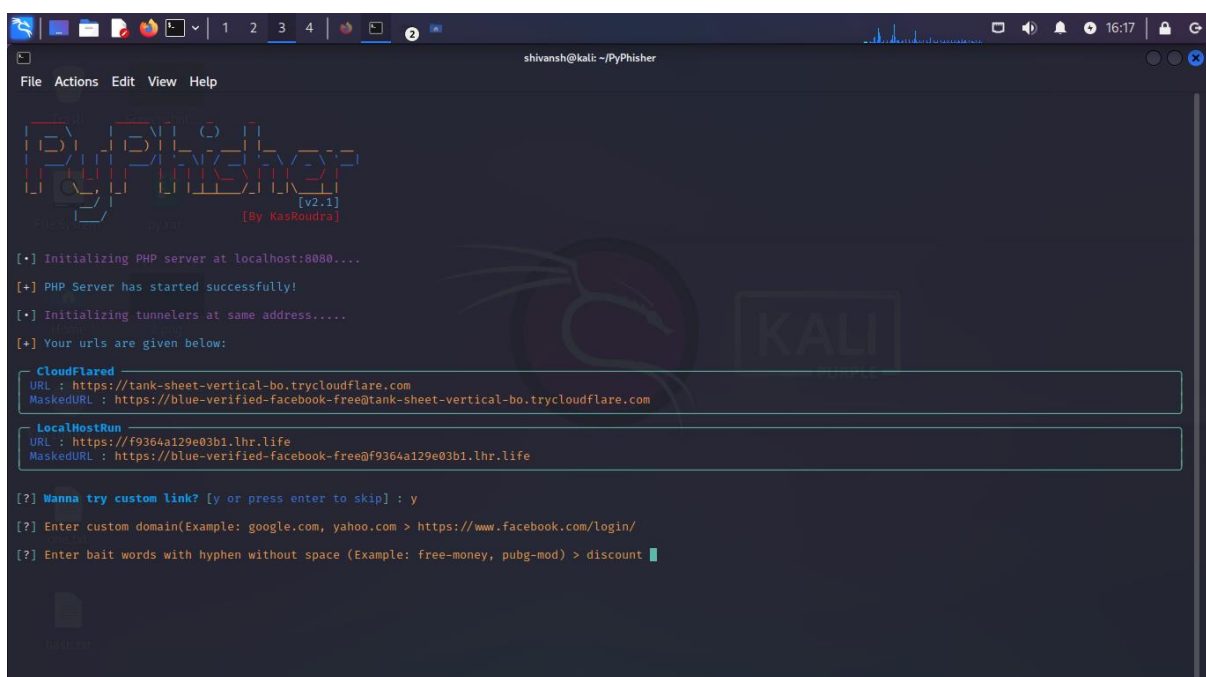

Here is another option Enter shadow URL (for social media preview) [press enter to skip]: press enter

Here another option Enter redirection URL [press enter to skip]: press enter.

```
shivansh@kali: ~/PyPhisher
[?] Wanna try custom link? [y or press enter to skip] : 
```

When the page is fully load you have two options 1st is generated and 2nd is custom link. First, we choose option a press n then enters. Copy the cloud Flared URL and send to the victim and wait until the victim enter username and password. here we end the 1st option that is generated.

```
shivansh@kali: ~/PyPhisher
[?] Enter custom domain(Example: google.com, yahoo.com > https://www.facebook.com/login/
[?] Enter bait words with hyphen without space (Example: free-money, pubg-mod) > discount
```

If we chose 2nd that is custom link press y, then enter. In that case I was click on 1st option do you remember. open your web browser and search Facebook login on the site and copy the link And paste to custom link and press enter. You have an opportunity to attract you victim by adding some attractive key like discount, sale, 1million like on your post, etc and then press enter. Your custom link is ready link. send to the victim machine or device.
